SUMMARY

Statistics graduate with hands-on experience in operational data analysis, time series forecasting, and interactive dashboard development. Proficient in Python, R, and SQL for statistical modeling, predictive analysis, and transforming complex data into actionable business insights. Experienced in applying deep learning and data visualization across operational projects and academic research. Driven to leverage quantitative analysis and predictive modeling to solve real-world problems and support strategic decision-making.

EDUCATION

Bachelor of Statistics (S.Stat)

Semarang

Diponegoro University (3.74/4.00)

August 2022 - April 2026

Relevant Coursework: Time Series Analysis, Data Mining, Artificial Neural Networks, Data Exploration & Visualization, Database Systems, Multivariate Statistics, Statistical Quality Control.

WORK EXPERIENCE

Data Analyst Intern

Kulon Progo

PT Angkasa Pura Indonesia, Yogyakarta International Airport

February 2025 - June 2025

- Developed a flight traffic forecasting system using R Shiny and time series models, including Holt-Winters, ARIMA, and Prophet, based on multi-year monthly flight data to support operational decision-making.
- Built interactive dashboards analyzing 6,500+ flight movement records over a 6-month period to evaluate daily trends, peak operational hours, apron utilization, and aircraft ground time.
- Processed and categorized 130+ regional Voice of Customer (VoC) records across 7 airport locations, covering complaints, suggestions, and lost-and-found cases, and developed visual reports for service improvement.

ACADEMIC PROJECTS

Undergraduate Thesis

Semarang

Nickel Price Forecasting with LSTM & Bayesian Optimization

November 2025 - April 2026

- Developed an LSTM-based forecasting model using Python to predict nickel prices from 1,200+ daily time-series observations.
- Built an end-to-end forecasting pipeline involving data preprocessing, sliding window sequence generation, Bayesian Optimization for hyperparameter tuning, and MAPE evaluation.
- Achieved an optimal out-of-sample MAPE of 0.92%, demonstrating high model accuracy for commodity price forecasting.

Data Visualization & User Behavior Analysis

Semarang

User Behavior at a Glance (Interactive Dashboard with Looker Studio)

November 2024 - December 2024

- Analyzed a multivariable behavioral dataset of 700 user records across 5 activity intensity tiers to explore digital engagement metrics.
- Evaluated resource consumption trends using scatter plots and summary scorecards, validating strong positive correlations between screen-on time and battery drain.
- Identified key factors driving battery consumption and user engagement to build interactive reports for device usage optimization.

ORGANIZATIONAL EXPERIENCE

Recruitment Division Member

Semarang

PRISMA (Student Photography Association)

February 2025 - March 2026

- Planned and executed recruitment timelines for new candidates, establishing a structured selection flow.
- Coordinated candidate communications and cross-committee logistics, including vendor operations and event schedules.
- Designed a promotional digital poster for open recruitment, expanding reach across target student demographics.

SKILLS & TOOLS

Technical Skills: Data Analysis, Time Series Forecasting, Deep Learning (LSTM), Statistical Modeling, Data Cleaning & Validation, Data Visualization.

Programming & Databases: Python (Pandas, NumPy, TensorFlow, Keras, Scikit-learn), R (Shiny, Tidyverse), SQL.

Tools & Software: Looker Studio, Microsoft Excel (Pivot Table, LOOKUPS), SPSS, Minitab.

Language: Indonesian (Native), English (Intermediate).
